i							

Continuation of 11. does NOT place the application in condition for allowance because: Regarding claim 1, the applicant asserts that the invention is directed toward transmitting a first message from the terminal to the MMC which requests the MMC to transmit a notification message to the terminal for multimedia messages addressed to the terminal, that have arriaved at the MMC and for which the terminal has not received any notification message. The applicant contends that the combination of 3GPP and Zahariev does not disclose these limitations. The examiner respectfully disagrees. The applicant argues that Zahariev is not concerned with and does not disclose or suggest a "multimedia messaging center" and only deals with email. The examiner points out that email is in fact multimedia because it may contain text, graphics, video, or attachment files of virtually any type. The applicant also argues that Zahariev is not concerned with transmitting a notification about a message that the terminal has not yet been notified about. The examiner again respectfully disagrees. The examiner points to line 64 of column 3 through line 7 of column 4 which describes selective filtering and notification of availability of selected information, of which can contain newly received email for which notification has not already been sent. The applicant also argues that 3GPP and Zahariev are not analogous art. The examiner again respectfully disagrees. It has been shown in the office action and described above how 3GPP and Zahariev are analogous art in that they both deal with multimedia messaging systems and notification from the MMC to the terminal of the arrival of new multimedia messages at the MMC.
